Top Skills

Python (Programming Language)
Machine Learning
Artificial Intelligence (AI)

Languages

English (Professional Working)
Hindi (Native or Bilingual)

Certifications

Google AI Essentials
Generative AI: Introduction and Applications
Data Visualization with Python
Supervised Machine Learning: Regression and Classification
Advanced Learning Algorithms

Publications

PPG-Based Accurate Insomnia Detection System Using Convolutional Neural Networks With Self-Attention Mechanism and Gated Recurrent Units
Automated Identification of Cyclic Alternating Patterns of Sleep Using Fusion of VGG16 and Vision Transformer
Automated Sleep Stage Classification Using Biorthogonal Wavelet Decomposition and Machine Learning Techniques

Prithviraj Verma

AI/ML Engineer | IEEE Published Researcher | Building Production ML Systems | Python • TensorFlow • Next.js • NestJS
Madhya Pradesh, India

Summary

I am an AI and Machine Learning engineer focused on building intelligent systems that move from research to real world deployment. My work combines applied machine learning, product development and research driven problem solving.

Currently I work on LLM powered automation systems at Garnet AI where I help build platforms that streamline vendor onboarding and compliance workflows for enterprise clients. The system reduces manual processing time and simplifies complex documentation driven processes using AI based automation.

Alongside product development I have been involved in research in biomedical signal processing. I co authored a research paper titled "Multi Feature Fusion for Sleep Stage Classification using EEG and ECG Signals" published in IEEE Access. My work focused on building deep learning frameworks including Vision Transformer based architectures to improve sleep stage classification accuracy.

I also enjoy contributing to the technical community. As part of the Coding Club at IITRAM I led AI and machine learning initiatives, mentored students in ML fundamentals and organized technical workshops that helped more students explore practical machine learning development.

My core areas of interest include machine learning systems, deep learning, computer vision and emerging AI technologies such as large language models and AI agents. I am particularly interested in building scalable ML systems that operate reliably in production environments.

Technical Areas

Machine Learning: TensorFlow, PyTorch, Scikit Learn, Computer Vision

Development: React, Node.js, MongoDB, REST APIs

Research: Signal Processing, Deep Learning, Academic Publications

Tools: Docker, Git, AWS, GCP, Data Visualization

I am always interested in collaborating on challenging AI problems, research initiatives and products that bring intelligent systems into real world applications.

Experience

Indian Institute of Technology, Indore

Researcher

June 2026 - Present (1 month)

Indore

Career Development Centre, IITRAM Ahmedabad

2 years 6 months

Coordinator

July 2025 - June 2026 (1 year)

Ahmedabad

As a CDC Coordinator at the Career Development Cell I actively contributed to bridging the gap between students and career opportunities. My role involved coordinating with team members to manage career related initiatives organizing professional development activities and supporting communication between students and the placement team. I also helped streamline information sharing about internships workshops and placement opportunities so that students could stay informed and prepared for their career paths. Through this experience I strengthened my coordination leadership and communication skills while working closely with a dynamic team focused on student growth.

Core Member

January 2024 - June 2026 (2 years 6 months)

Ahmedabad

Core member in Career development cell

Handling website development and maintenance ,Academic calendar and content Creator

Head of Content Creation and Social Networking

August 2024 - July 2025 (1 year)

Ahmedabad, Gujarat, India

Spearheading the content creation and social networking strategies for the Career Development Cell (CDC), ensuring effective communication and engagement across digital platforms.

Managing the CDC's social media presence to enhance its outreach and foster stronger student engagement.

InSolare Energy Limited

Machine Learning Engineer

April 2025 - June 2026 (1 year 3 months)

Ahmedabad

Working as a Software Developer at InSolare Energy Limited where I designed developed and deployed two major software solutions for internal operations.

The first was an AI based passive attendance system with anti spoofing capabilities used in InSolare workshops to automatically detect faces and record attendance securely. The second was a Solar Panel Operations and Management system that enabled monitoring and classification of panels based on their condition such as physical or electrical damage while also tracking input output performance and operational data. Both systems were successfully deployed and used in real operational environments which provided strong exposure to building practical scalable software solutions.

Garnet AI

AI/ML and Full Stack Engineer

May 2025 - August 2025 (4 months)

Dublin, County Dublin, Ireland

- Architected and deployed LLM-powered automation platform reducing vendor onboarding time by 60%, processing 200+ enterprise clients monthly
- Built compliance assistant using RAG (Retrieval-Augmented Generation) with 95% accuracy in regulatory document analysis
- Developed full-stack web application using React, Node.js, and MongoDB serving 500+ daily active users
- Implemented CI/CD pipeline using Docker and AWS, reducing deployment time from 2 hours to 15 minutes
- Technologies: Python, TensorFlow, React, Node.js, MongoDB, Docker, AWS, OpenAI API

Coding club IITRAM

1 year 11 months

AI/ML Team Lead

January 2025 - August 2025 (8 months)

Ahmedabad, Gujarat, India

As the AI/ML Team leader at my college's Coding community, Tekstra, I have to provide Newsletters and organise various workshops, talks and Hackathons regarding AI/ML and promote the coding culture among my fellow peers.

Senior Programmer

October 2023 - January 2025 (1 year 4 months)

Ahmedabad, Gujarat, India

Indian Institute of Technology, Delhi

Research Intern

January 2025 - June 2025 (6 months)

New Delhi, Delhi, India

- Authored IEEE Access publication on sleep stage classification achieving 99.2% accuracy using EEG/ECG signal fusion
- Developed Vision Transformer-based architecture reducing model size by 40% while maintaining classification performance
- Implemented end-to-end ML pipeline processing 10,000+ biomedical signals with real-time inference capabilities
- Collaborated with medical professionals to validate algorithm performance on clinical datasets
- Technologies: Python, PyTorch, OpenCV, Signal Processing, Computer Vision

GeeksforGeeks

Campus Mantri

December 2024 - June 2025 (7 months)

Ahmedabad

Served as the Campus Mantri for GeeksforGeeks where I acted as a bridge between the student community and the GeeksforGeeks platform. I was responsible for promoting technical learning initiatives organizing coding related activities and encouraging students to actively participate in programming and problem solving. I helped increase awareness about competitive programming resources technical articles and learning tracks available on the platform. Through this role I engaged with the student community facilitated knowledge sharing and contributed to building a stronger culture of coding and technical development on campus.

Unstop

Campus Ambassador

October 2024 - May 2025 (8 months)

Ahmedabad, Gujarat, India

Served as a Campus Ambassador for Unstop where I helped promote competitions hackathons and learning opportunities among students on campus. My role involved increasing student engagement with the platform by sharing relevant opportunities organizing awareness initiatives and encouraging participation in skill building events. Through this experience I worked closely with student communities helped connect peers with national level competitions and contributed to building a more active culture of innovation and professional development on campus.

MARKx-AI Labs

AI/ML Intern

January 2025 - March 2025 (3 months)

Ahmedabad, Gujarat, India

Worked as an AI ML Intern at MarkX AI Labs where I developed an AI powered Telegram based trading bot designed to analyze market trends and provide trading insights. The system was built to process financial data identify potential trading opportunities and deliver timely updates to users through an automated Telegram interface. I also implemented agentic workflows that enabled the system to execute strategy driven decisions with real capital in controlled scenarios. This role provided hands on experience with machine learning for financial markets automation pipelines and real world deployment of AI systems.

Blix Education

AI Developer

January 2025 - March 2025 (3 months)

Pune, Maharashtra, India

Worked as an AI Developer at Blix Education where I developed an AI based self driving car model. The project involved building and training machine learning models that enabled the vehicle to interpret visual inputs and make autonomous driving decisions such as lane following and obstacle awareness. I worked on data processing model training and system integration to ensure the car could operate reliably in controlled environments. This experience strengthened my understanding of computer vision machine learning pipelines and real world AI deployment.

YADS Technologies Pvt Ltd

Data Analyst

June 2024 - August 2024 (3 months)

Vadodara, Gujarat, India

Worked as a Data Analyst at YADS Technology Pvt. Ltd. where I focused on analyzing data to extract meaningful insights that supported business decision making. I worked with datasets to identify trends patterns and performance indicators while developing analytical reports and visualizations for stakeholders. During this role I also contributed to improving data processing workflows and optimizing API related operations which enhanced the efficiency of internal data analysis systems. The experience strengthened my skills in data analysis problem solving and translating complex data into actionable insights.

Education

Institute of Infrastructure Technology Research and Management (IITRAM)

Bachelor of Engineering - BE, Computer Engineering · (August 2023 - July 2027)

Medicaps international school

12th, PCM · (May 2022 - May 2023)

St. Paul's H. S. School

10th · (May 2019 - May 2020)
